If you are testing out your new boost capacitor, be sure you allow several minutes between startups of your A/C. This ensures that pressures within the A/C system equalize and the compressor motor will start much easier. If it's particularly hot out, the A/C system will have very high pressure on one side of the system after shutdown.

What is a condenser? In a HVAC unit the condenser is where the heat extracted from the interior is released into the open air. The cooled refrigerant then returns to the evaporator where the air that flows over it is chilled, causing the interior temperature to drop. Condenser problems will affect heating and cooling.
