

Pictures Bones Of The Skull

A collection of 22 bones, the skull protects the all-important brain and supports the other soft tissues of the head. During fetal development, the bones of the skull form within tough, fibrous membranes in a fetus' head.

Skull - Anatomy Pictures and Information

The skull of fishes is formed from a series of only loosely connected bones. Lampreys and sharks only possess a cartilaginous endocranium, with both the upper and lower jaws being separate elements. Bony fishes have additional dermal bone, forming a more or less coherent skull roof in lungfish and holost fish. The lower jaw defines a chin.

Despite this, there is little consensus on what our family tree is. Everyone accepts that the robust australopithecines (aethiopicus, robustus and boisei) are not ancestral to us, being a side branch that left no descendants.Whether H. habilis is descended from A. afarensis, africanus, both of them, or neither of them, is still a matter of debate.
