F-Diagram. The foundations for the "F-diagram" being used today were laid down in a publication by WHO in 1958. This publication explained transmission routes and barriers to the transmission of diseases from the focal point of human feces.. Modifications have been made over the course of history to derive modern-looking F-diagrams.

A phase-locked loop or phase lock loop (PLL) is a control system that generates an output signal whose phase is related to the phase of an input signal. There are several different types; the simplest is an electronic circuit consisting of a variable frequency oscillator and a phase detector in a feedback loop. The oscillator generates a periodic signal, and the phase detector compares the ...

A neuron, also known as a neurone (British spelling) or nerve cell, is an electrically excitable cell that communicates with other cells via specialized connections called synapses. It is the main component of nervous tissue. All animals except sponges and placozoans have neurons, but other multicellular organisms such as plants do not.
