When referring to water heater elements, "density" refers to the amount of wattage per square inch of surface area. As an example, a heater element with 10 square inches of surface area, rated for 1,500 watts, would conduct 150 watts per square inch when in use.

### **Low Density vs. High Density Water Heater Elements | Hunker**

Tankless water heaters, also known as demand-type or instantaneous water heaters, provide hot water only as it is needed. They don't produce the standby energy losses associated with storage water heaters, which can save you money.

### **Tankless or Demand-Type Water Heaters | Department of Energy**

A heat pump is a device that transfers heat energy from a source of heat to what is called a heat sink. Heat pumps move thermal energy in the opposite direction of spontaneous heat transfer, by absorbing heat from a cold space and releasing it to a warmer one. A heat pump uses external power to accomplish the work of transferring energy from the heat source to the heat sink.
